CAREER OBJECTIVE

Building data pipelines and modern web applications, from raw data to working products. Web Developer and Data Engineer with hands-on experience delivering web applications and data solutions using C#, ASP.NET Core MVC, JavaScript, Python, SQL, Java and Power BI. Led a team in building Shifa, a modern web application for clinic appointments and nearby pharmacies, and completed the 200-hour Microsoft Data Engineer (MSDE) track and the 80-hour AI Ambassadors program. Seeking a Web Developer, Data Engineering or Data Analyst role where I can build reliable web products, design clean data models and turn raw data into clear business insights.

EDUCATION

Bachelor's Degree in Business Information Systems (BIS)

Faculty of Commerce & Business Administration | Graduated

- Specialized in designing and building information systems that connect business needs with technology, combining software development, database engineering and data analysis.
- Focus areas: Systems Analysis & Design (use case diagrams, activity diagrams, ERD and relational schema modeling), Relational Database Design (Oracle, MySQL, SQL), Object-Oriented Programming (Java), Web Application Development, and Business Intelligence & Data Analysis.
- Applied the degree's focus areas in practice by analyzing, modeling and implementing complete systems, from requirements and database design to a working application.

EXPERIENCE & TRAINING

Web Developer & Team Leader

Shifa Medical Services Platform | Team project

- Led the full team through the project lifecycle: defining the idea and scope, distributing tasks, coordinating design and development, and preparing documentation and the final presentation.
- Developed a modern web application for booking clinic appointments and locating nearby pharmacies using C# and ASP.NET Core MVC, with a clean and user-friendly interface prototyped first in Figma, and connected to a Microsoft SQL Server database through ADO.NET to store, query and process appointment and pharmacy data.
- Led system analysis and modeling, including use case diagrams, activity diagrams, ERD and a relational schema covering patients, doctors, appointments, doctor schedules, reviews and pharmacies.
- Tools and technologies: C#, ASP.NET Core MVC, HTML5, CSS3, JavaScript, Microsoft SQL Server, ADO.NET, Visual Studio, Figma, Draw.io, Visual Paradigm, Git and GitHub.

Microsoft Data Engineer (MSDE) - AI & Data Science

Digital Egypt Pioneers Initiative (DEPI) - Ministry of Communications (MCIT) | 200 Training Hours

- Practiced Python and SQL for advanced database operations, complex querying and high-volume data processing.
- Built practical knowledge of data pipelines, ETL workflows and data transformation, including data cleaning and preparation for analysis.
- Applied exploratory data analysis (EDA), statistics and machine learning algorithms to real-world datasets.
- Tools and technologies: Python, SQL, Relational Databases, ETL, Machine Learning.

Artificial Intelligence Ambassador

National Telecommunication Institute (NTI) & ESE | 80 Training Hours (Advanced Level: 40 Hours, Beginner Level: 40 Hours)

- Studied AI principles, machine learning concepts, Natural Language Processing (NLP) and AI ethics.
- Built interactive Power BI dashboards with KPI tracking for data analysis and visual storytelling.
- Used Generative AI tools (including ChatGPT) for problem-solving and workflow optimization.
- Delivered a complete Power BI sales analytics dashboard as the program's final project.

- Tools and technologies: Microsoft Power BI, Generative AI, NLP.

Egyptian Banking System Model (EBSM) - Banking Fellowship

Banque Misr Training

- Completed intensive sessions covering Financial Inclusion, Banking Operations and institutional workflow processes.
- Gained a practical understanding of how banking services and internal workflows operate, which supports business process analysis and system design.

SKILLS

Technical Skills

- **Web Development:** C#, ASP.NET Core MVC, HTML5, CSS3, JavaScript (ES6+), React, Vite, Git & GitHub.
- **Programming Languages:** C#, Python, Java, JavaScript.
- **Data Engineering & Databases:** SQL, Microsoft SQL Server, Oracle Database, MySQL, ADO.NET, Relational Database Management Systems (RDBMS), Data Modeling, ETL Pipelines, Data Processing, Data Cleaning, Data Transformation.
- **Data Science & AI:** Artificial Intelligence (AI), Machine Learning (ML), Natural Language Processing (NLP), Exploratory Data Analysis (EDA), Statistics, Generative AI (GenAI), ChatGPT, AI Ethics.
- **Business Intelligence & Visualization:** Microsoft Power BI, Data Visualization, Interactive Dashboards, KPI Tracking, Visual Storytelling.
- **Tools & Methodologies:** Object-Oriented Programming (OOP), Visual Studio, NetBeans IDE, Figma, Draw.io, Visual Paradigm, MS Office Suite (Advanced Excel, PowerPoint, Word).

Language Skills

- Arabic: Native
- English: Upper-Intermediate (B2)

Soft Skills

- Team Leadership, Analytical Problem Solving, Adaptability, Effective Communication, Team Collaboration.

PROJECTS

Shifa - Clinic Appointments & Nearby Pharmacies Web Application

Team Leader & Web Developer | C#, ASP.NET Core MVC, SQL Server, ADO.NET, HTML, CSS, JavaScript, Figma, Git & GitHub

- Led a team to design and build a modern web application that lets patients find doctors, book clinic appointments and locate nearby pharmacies in one place.
- Designed a structured relational database in Microsoft SQL Server with entities for patients, doctors, appointments, doctor schedules, reviews and pharmacies, supported by ERD and relational schema diagrams.
- Produced full system documentation, including use case and activity diagrams, and presented the project.

Sales Performance Dashboard

Microsoft Power BI | NTI AI Ambassadors Program

- Developed an interactive Power BI dashboard analyzing sales performance across six major Egyptian cities for a retail business.
- Designed KPI cards tracking Total Sales (95K+), Net Profit (36K+) and Order Volume alongside dynamic monthly trend lines.
- Implemented multi-dimensional data filtering to enable detailed exploration of product category performance.

Clinic Management System (Desktop Application)

Java, NetBeans, Oracle, MySQL, SQL

- Engineered a clinic management application to handle patient registrations, medical appointments and schedules efficiently.
- Designed structured relational database schemas (ERD) and applied integrity constraints to ensure secure and consistent record storage.

Student GPA Calculator (Desktop Application)

JavaScript, HTML, CSS | Desktop Application

- Developed a desktop application with a calculator-style interface that calculates cumulative GPA and honors classifications based on credit-hour weights.
